EDGARDO E. TULIN

President

Visayas State University

Visca, Baybay City, Leyte

Dear Dr. Tulin,

Greetings from the Institute of Tropical Ecology and Environmental Management!

The Envi 116n - Watershed Management course of the Bachelor of Science in Environmental Science (BSES) and Bachelor of Science in Development Communication (BSDC) will conduct off-campus laboratory/field activity at Brgy. Patag, Baybay City, Leyte on June 17, 2023. This activity involves conducting interviews from the different stakeholders (CENRO, City ENRO, LGU, Water district and Community) and presentation of the results during secondary data collection and interview from different stakeholder's in watershed management.

Transitioning from the Online Mode of Learning, these BSES and BSDC students must acquire in-depth training in the necessary field sampling techniques as future environmental scientists and extensionists – this includes the assessment and management of the watershed. As part of the curriculum, students' must experience actual immersion in the field. Otherwise, they will surely be incompetent as they proceed further in their career. Since this activity is the first to perform after a pandemic, we hope that this will continue on the next set of students for the monitoring of the status of the watershed in Brgy. Patag. Furthermore, we have an emergency preparedness plan should unfortunate events arise. For your inspection, the required documents are attached hereto for this off-campus activity.

We are hoping for your positive response. Thank you, and God bless!
