

TRAINING DESIGN

Title

Training on the Production of Natural Farming Inputs

Participants

Municipal Agriculture Office Carigara, and 4H Club

Date

July 9, 2025, 8:00AM - 5:00PM

Venue

Carigara, Leyte

Rationale

The Eco-Farm and Resource Management Institute (Eco-FARMI) has been providing training and assistance on various natural farming techniques, inputs, and soil amendments. These several trainings have significantly created an impact on many learners, especially farmers. Considering that the majority of farmers use chemicals to enhance and increase their yield, the training that Eco-FARMI provides such as Natural Farming Inputs, Natural Farming Techniques, and Soil Amendments through vermicomposting and IMO6 has been significantly providing alternative solutions in reducing the use of synthetic fertilizers and other chemicals, while maintaining the soil health and crop productivity.

This training is thoroughly crafted to cater the specific target at the Municipality of Carigara in partnership with their Municipal Agriculture Office, in which the 4H Club is the specific participant. This 4H Club is a group of youth who are eco-agriculture enthusiasts. This planned training will create a lasting impact by educating the participants on the different practices and techniques. It also plans to encourage adopting what they will learn throughout the training, which will contribute to a more sustainability and lessen the use of chemicals in farming.

Participants of this training will learn the skills necessary to implement the use of natural farming inputs, vermicomposting, IMO6, and natural techniques and practices being embedded in them. These can be utilized in their respective homes and communities. This initiative aims to empower participants, foster strong support for sustainable practices, and instill a strong sense of sustainability in farming and the environment.

Moreover, this training will not only educate them; it will also support their enthusiasm for eco-agriculture and foster sustainability through holistic practices, noting that youth are the hope for the future and the upcoming generation.
