dead/sick/disabled/others (specify) \_\_\_\_\_.

\_\_\_\_\_  
Property Officer or Authorized Representative

\_\_\_\_\_  
Auditor or Authorized Representative

22 July 2022

## NECROPSY REPORT

### Animal ID and History

A ~one-year-old male goat from Eco-FARMI was reported dead on July 22, 2022, at around 12:30 PM. The caretaker found the goat's head submerged in a puddle of (river) water while entangled with its tethering rope. There were no signs of weakness and other clinical manifestations a day before death. A necropsy was performed at around 4:00 PM.

### Necropsy Findings

The main gross pathological findings were the abundance of froth in the trachea and hyperemic lungs showing frothy fluids upon dissection, especially in the cranial lobes of the lungs. The liver parenchyma had ~2.5 cm of localized fibrosis. No parasites were found in the liver, gall bladder, and abomasum. No gross lesions were found in the heart, kidneys, spleen, and gastrointestinal tract.

### Diagnosis

Necropsy findings indicate that the cause of death is respiratory impairment due to submersion in water (i.e., drowning).
