DR. DANIEL LESLIE S. TAN

Vice President, Administration and Finance
Visayas State University

Dear Dr. Tan,

The construction of the NARC Research and Instructional Laboratory Building was completed in October 2021. The said building was turned over by the contractor to Engineer Mario Lilio P. Valenzona on that same month. However, the building cannot be formally turned over yet to NARC at that time because the contractor submitted a Deductive/ Additive Proposal subject for VSU BOR approval on the changes made to some features of the building.

As per Dr. Edgardo E. Tulin, the proposal was already tackled during the BOR Committee meeting. He advised us to ask an Acceptance Report of the NARC Research and Instructional Laboratory Building from your office so that we can use already the newly completed building.

The new building will house the NARC Tissue Culture Laboratory together with the four other laboratories of the center and a Conference Room. We hope to use the new building the soonest possible time so that we can perform our research and production activities to the best of our capacities.

Thank you very much.

Sincerely yours,

ROBELYN T. PIAMONTE
Director, NARC
