

15 August 2022

### Death Incident Report

According to our Animal caretaker, Mr. Fernando D. Bolastig, around 7:00 in the morning of August 12, 2022 (Friday), he observed that one of the sows in the farm is inactive. He noticed that the sow showed loss of appetite, less physical activity, and high body temperature. With that observations, the sow was assisted in feeding (hand-feed), offered paracetamol, and more water. A presence of effervescence was also observed on the rejected feed and dissolved paracetamol.

On August 13, 2022 (Saturday), the same observations were noticed. Sadly, the sow was found dead inside the pen on August 13, 2022 at 6:30 in the morning.
