To whom it may concern,

Good Day!

It has come to my attention that the Plant Disease Diagnostic Laboratory (PDDL), is looking for a Science Research Specialist I. I am particularly interested in the said position. Though, the said position needs to be knowledgeable in molecular plant pathology but I am eager to apply and willing to learn more about my work like what I did to my work in CASL since I am a Chemistry bachelor graduate and I know nothing about the importance of soil, plant tissue and organic fertilizer analysis. I believe that "Experience is the best teacher". My knowledge, skills, and attitude towards doing research and laboratory work make me an excellent fit for the Science Research Specialist I position.

I worked as a Science Research Assistant/Laboratory Analyst for 8 years in CASL. I have gained valuable skills and expertise which are necessary in managing the laboratory and other matters concerning the laboratory. My work in the lab also allowed me to actively participate in various trainings and seminars, locally and internationally. Through this experience, I was able to have a first-hand exposure of the high-end equipment. This made me become more flexible in adapting new technology as well as deal with the problems efficiently. I am also pursuing my Master of Science in Soil Science and this, in turn, augment my knowledge and understanding in the conduct of soil, organic and plant tissue analysis. My experience inside the laboratory as science research assistant and as a postgraduate student makes me more confident about my abilities to work efficiently and effectively.

Having studied and worked in a university for 12 years, I believe that aside from the technical skills I learned, I also developed positive attitudes such as being cooperative, confident, hardworking and helpful towards achieving work goals.

Thank you for sparing your time in reading my application. It will be my pleasure to undergo for an interview at your most convenient time.

Respectfully yours,

Juvylyn R. Glory
