

# MATERNAL-FETAL ULTRASOUND CENTER

Bonifacio St., Ormoc City  
Tel No. – 0915 143 2683 / 0938 219 3343

## FIRST TRIMESTER SCAN

Referring Physician:	New Patient	Date:	January 26, 2023
Name:	CORTES, MARJORIE	Age:	28
LMP:	December 16, 2022	OB Score:	G1P0
Clinical Diagnosis:	Pregnancy uterine 5 6/7 weeks age of gestation by LMP		

## TRANSVAGINAL SCAN

The uterus is retroverted with globular contour and homogeneous echopattern measuring 8.0 x 5.4 x 5.4 cm. The cervix measures 2.9 x 2.2 x 2.3 cm with homogenous stroma and distinct endocervical canal. Within the endocervical canal is an echogenic structure measuring 1.3 x 1.0 x 0.58 cm with an anterior feeder vessel suggestive of an endometrial polyp.

Within the endometrial cavity is a single, well-decidualized gestational sac measuring 2.1 x 2.9 x 0.8 cm with mean sac diameter of 1.9 cm equivalent to 6 weeks age of gestation. Within the gestational sac is a single embryo with a crown-rump length (CRL) of 0.21 cm, equivalent to 5 weeks and 5 days with faint fetal cardiac activity (105 bpm). The yolk sac measures 0.2 cm. There is no subchorionic hemorrhage seen.

The right ovary is lateral to the uterus and measures 2.9 x 2.3 x 2.0 cm.

The left ovary is lateral to the uterus and measures 4.0 x 4.8 x 3.9 cm. Within the left ovary is a unilocular, anechoic cystic structure measuring 3.4 x 3.9 x 3.2 cm. There is no color on color flow mapping.

There is no free fluid in the cul-de-sac.

### IMPRESSION:

Single live intrauterine pregnancy 5 weeks and 5 days age of gestation by crown-rump length with faint cardiac activity.

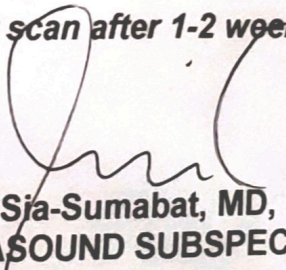

To consider Endocervical polyp.

Follicular cyst left ovary

Normal right ovary.

Estimated date of delivery by ultrasound: September 23, 2023 (+/- 5 to 7 days)

Recommendation: Suggest repeat scan after 1-2 weeks.

  
Maria Ramona C. Sia-Sumabat, MD, FPOGS, FPSMFM, FPSUOG
