ULTRASOUND SECTION

Ultrasound Number :
Patient Name : ESCALA, LEOPOLDO
Address : BAYBAY CITY, LEYTE
Referring Physician : DR. M. CARAWANA JR.
Procedure : ABDOMEN

Date: 01-09-24
Age: 69 Sex: M

Note: This report is based entirely on the ultrasonographic examination and should be correlated with roentgenological, clinical and laboratory findings.

ULTRASOUND RESULT

The liver is normal in size and echo pattern. There is hypoechoic mass in the right lobe measuring about 7.8 x 7.2 cm. The intrahepatic ducts are not dilated. The common duct measures about .2 cm. The gallbladder is normal in size. There are non-shadowing intraluminal echoes seen. The wall is not thickened. The spleen and pancreas are normal in size and echo pattern. No mass lesion seen.

There are at least five hypoechoic nodules in the para-aortic peripancreatic area with the largest measuring about 3.5 x 2.1 cm.

The right kidney measures about 9 x 4.4 cm with a cortical thickness of 1.4 cm while the left kidney measures about 9.7 x 5.2 cm with a cortical thickness of 1.5 cm. No stone or hydronephrosis noted. The corticomedullary junctions are intact. The urinary bladder is distended. No intraluminal echoes seen. The wall is thickened.

The prostate gland is enlarged measuring 4.8cm x 3.8cm x 4.2cm and exhibits a homogenous echo pattern with estimated weight of 41 grams.

There is minimal ascites demonstrated.

IMPRESSIONS:

- SOLID HEPATIC MASS, CONSIDER A NEWGROWTH. TISSUE BIOPSY AND CORRELATION WITH CT SCAN OF THE ABDOMEN RECOMMENDED
- GALLBLADDER SLUDGES
- ENLARGED LYMPHADENOPATHIES, PERIPANCREATIC PARA AORTIC AREA
- CHRONIC CYSTITIS
- ENLARGED PROSTATE GLAND.
- UNREMARKABLE SPLEEN, PANCREAS AND KIDNEYS.
- MINIMAL ASCITES

RUTH A. OMEGA, M.D., FPCR
Radiologist/Sonologist

THANK YOU FOR YOUR REFERRAL!
