R E: Result of Survey Conducted by the Baybay City Health Office

A survey conducted by the Baybay City Health Office last June 24, 2016 revealed the presence of dengue-mosquito (*Aedes*) larvae in the vicinity of your housing unit. The larvae were found either in flower pots, empty containers, tires or ponds that have accumulated water.

To contain the possible spread of infection, please be advised to drain out and get rid of these potential mosquito-breeding places in your unit's vicinity.

VSU Hospital

Dear Sir:

Good day!

Last June 24, 2016, Friday, we conducted larval survey at some of the apartments in your university. These apartments are near the households with dengue cases.

Attached herewith is the result of our preliminary survey. Based on the survey we conducted, we recommend the following actions:

1. Conduct of university wide clean up especially in areas with residing faculty, staff and students.
2. Close monitoring of clean up activity especially in the neighborhood with dengue cases.
3. University wide health education on dengue, other mosquito borne illnesses and other illness caused by untidy environment and adequate measures to be taken in order to eliminate these diseases.
4. Immediate reporting of additional dengue cases and other reportable diseases.

For any concerns or assistance for these activities, please contact us at the City Health Office at 335-3321.

Respectfully yours,

KRISTINE SHAYNE C. ABARQUEZ, RN
Nurse II
