

4 December 2017

MEMORANDUM CIRCULAR NO. 92
Series of 2017

T O: All VSU Constituents

R E: Results of the Water Testing Analysis

Our water supply was subjected to bacteriological testing at the EVRMC Laboratory, Tacloban City last November 16, 2017.

The results showed that the water from the following areas is not safe for drinking:

- a) PCC Reservoir (Lago-lago River) and its distribution points, (PCC and Department of Animal Science); and,
- b) Forestry Tank and its distribution points (Administration Building, old Library, DLABS and College of Engineering)

The water from Magdagooc River with distribution points at the lower campus including the VSU Hospital passed the test and is safe for drinking.

All concerned VSU residents and water consumers in the areas where water is not safe for drinking are advised to boil the water for at least 15 minutes before consumption.

For the information and guidance of all concerned.

EDGARDO E. TULIN
President
